(54) Title: FUEL CELL SYSTEM

(57) Abstract: A fuel cell system has a fuel cell (1) performing power generation as a result of reactions in a supplied gases, a humidifying device (34) for humidifying the at least one supplied gas by using water from water tank (31), and a coolant temperature regulation device (21, 22, 25, 26, 27, 28, 51) for regulating the temperature of the coolant flowing within the fuel cell (1) in order to control the temperature of the fuel cell (1), and a defrosting device (61). The defrosting device (61) melts ice in the water tank (31) during a startup operation of the fuel cell system (1) by applying heat contained in the coolant to the ice. which Here, the coolant has an increased temperature as a result of heat exchange with waste heat produced during power generation inside the fuel cell (1).

INTERNATIONAL SEARCH REPORT

International Application No /JP 03/13054

Relevant to claim No.

A. CLASSIFICATION OF SUBJECT MATTER IPC 7 H01M8/04 H01M8/02

C. DOCUMENTS CONSIDERED TO BE RELEVANT

H01M8/04

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Category °

Minimum documentation searched (classification system followed by classification symbols) H01M IPC 7

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the International search (name of data base and, where practical, search terms used)

Citation of document, with Indication, where appropriate, of the relevant passages
